CAREER OBJECTIVE

Detail-oriented Computer Science graduate with hands-on experience analyzing complex datasets, building data pipelines, and developing visualizations to support data-driven decision making. Skilled in SQL, Python, and BI tools (Power BI, Tableau) with a strong analytical foundation from applied machine learning research on real-world clinical datasets. Seeking a Data Analyst role to translate raw data into actionable business insights.

EDUCATION

North South University

Bachelor of Science in Computer Science and Engineering

Dhaka, Bangladesh

Sep. 2021 – May. 2026

EXPERIENCE

Research Assistant

Big Matrix R&D Lab, North South University

January 2025 – Present

Dhaka, Bangladesh

- Analyzed and processed **large-scale multimodal medical datasets** to build an **Attention-Driven AI model**, performing data cleaning, feature extraction, and statistical evaluation that fed into a **hospital-deployed clinical testing pipeline**.
- Conducted **exploratory data analysis and signal quality assessment** on echocardiographic imaging data, using statistical techniques to identify noise patterns and quantify model performance improvements.
- Built data preprocessing and evaluation pipelines using **Python (Pandas, NumPy)**, applying **quantitative metrics** to compare model outputs across **U-Net, GAN, Diffusion, and State-Space Model** architectures.

Software Developer Intern

PerceptronBD

May 2024 – July 2024

Dhaka, Bangladesh

- Integrated **Google Firebase authentication and backend data flows** for an EdTech platform using **React.js**, ensuring accurate and reliable user data capture.
- Supported backend development with **Express.js** for a restaurant chain's order system, working with transactional data structures handling **over 1,000 customer records daily** while maintaining data accuracy and performance.

PROJECTS

AnomalyNQA | Python, Pandas, PyTorch, React, Flask

January 2025 – March 2025

- Analyzed large **video and event-log datasets** to design a transformer-based anomaly detection model, applying **statistical thresholding and query-relevance scoring** to reduce false-positive detection rates.
- Built interactive **dashboards and reporting views** in React to visualize detection results and trends, deployed via Docker for cross-platform access.

MedSegAI | Python, TensorFlow, Django, React

June 2025 – July 2025

- Processed and analyzed **real patient mammography data** to evaluate segmentation model accuracy, building a **reporting interface** in React/Django to present quantitative results to radiologists.
- Deployed the analytics system via **Docker** in a hospital environment, where it continues to generate **data-driven insights** from live patient cases.

SonoClear | Python, TensorFlow, Pandas, Statistical Analysis

January 2026 – March 2026

- Performed **quantitative image-quality analysis** on ultrasonographic datasets, applying statistical metrics to measure denoising performance and clarity improvements.
- Tested and validated findings in **clinical environments**, compiling performance reports to support evaluation for large-scale healthcare deployment.

TECHNICAL SKILLS

Languages & Querying: SQL (MySQL, PostgreSQL), Python, JavaScript/TypeScript

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Power BI, Tableau, Excel (PivotTables, VLOOKUP)

Tools & Platforms: Git, Docker, N8N, Jupyter Notebook

Other: Statistical Analysis, Data Cleaning & Preprocessing, Dashboard Development, A/B Testing fundamentals
